

What is Lip Blushing, and Why Is It The Latest Lip Trend for 2020?

The latest trend of lip blushing has made it really easy to get the perfect lips, without having to rely on makeup every day!

2020 is here, and so is the latest trend for lips in the cosmetic industry – lip blushing. Gone are the days when people would opt for filler injections, tattooed lip liner, or worry about continuously re-applying their lipstick. Now you can get this low-maintenance and long-lasting treatment to get lips that look fuller, tinted and vibrant. Not to mention, insanely attractive!

Lip blushing gives you lips that get you noticed

Lip blushing is a new cosmetic lip tattooing technique. It creates a soft, natural-looking blush of color that defines the shape of your lips and gives them a flushed, plump appearance. The lip color can be customized for each person according to their natural undertone and lip color, as well as their skin tone.

Better than the other cosmetic procedures

One of the best things about this procedure is that it delivers results that are extremely natural once your lips are healed. While fillers may be great for adding volume to your lips, lip blush gives your lips the illusion of fuller lips. It is a semi-permanent service that gives you long-lasting results.

How lip blushing works

Your cosmetic surgeon or cosmetic tattoo artist will first apply a topical cream to temporarily numb your lips so that you don't have to feel any discomfort. Using a handheld rotary device with a tiny needle, she will deposit pigments into your lips, gradually building colors. A cosmetic artist can help you decide which color would be perfect for your skin tone.

Many people are also getting lip blushing to correct the tone of their lips as well as fixing the asymmetry.

So, how long-lasting are the results?

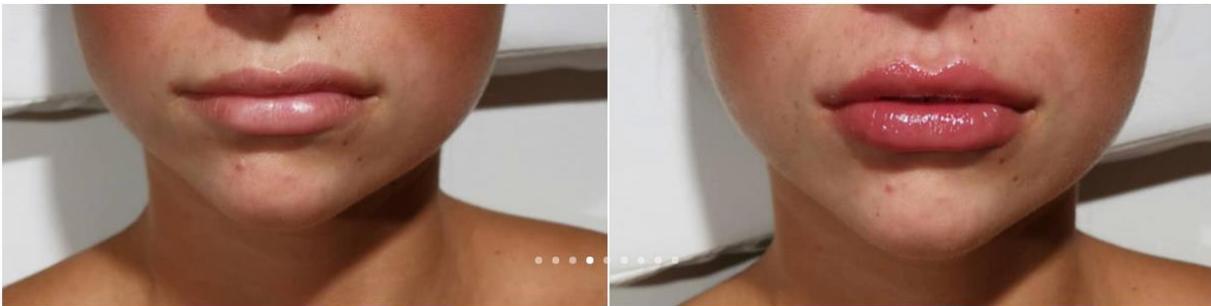

Like microblading or any other procedure that involves filling small cuts in the skin with ink, how long the results will last depends is different for each customer. Typically, you can enjoy the results for two to five years. However, your fading process can speed up if you smoke, get too much sun exposure or do things like biting your lips or getting oral fixation done. Other things

that can affect your pigment include being oil-prone, using excessive amounts of exfoliating products, and having an iron deficiency.

The treatment and the recovery

On average, a lip blush treatment can last up to two hours. In about five to seven days, the scabbing usually disappears. Your lips can get completely healed in about four weeks after the procedure.

CLIENTS - BEFORE & AFTER

Get the perfect lips

If you are considering getting a lip blush treatment, Kimberly Culbertson at **Beauty Babe Club** is the cosmetic artist you need! You can call her or book an appointment to discuss your goals in detail, and she will help you out in her amazing, friendly style.

Let us deliver the results that you need to look as beautiful as you want! We are offering an exclusive discount for our first-time clients.
